National Medical Association

2024 Annual Convention and Scientific Assembly

PEDIATRIC SECTION

Intended Audience

This educational activity is designed for physicians, related health professionals, trainees and residents, representing a variety of medical specialties and health professions.

Format

Educational activities will include lectures, panel discussions, question and answer sessions.

Continuing Medical Education:

The National Medical Association is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. The National Medical Association designates this educational activity for a maximum of 20.75 *AMA PRA Category 1 Credits*[™]. Physicians should only claim credit commensurate with the extent of their participation in the activity.

Statement of Disclosure

Faculty for the National Medical Association seminars are expected to disclose at the beginning of their educational presentation any relevant financial relationships with a commercial entity.

Disclaimer

The National Medical Association (NMA) and its staff are not responsible for injury or illness resulting from the use of medications or modalities discussed during this educational activity. The NMA does not endorse the use of off-labeled medications. All speakers must acknowledge the status of drugs discussed and not approved by the FDA for patient care.

ACKNOWLEDGEMENTS

The Pediatric Section acknowledges the following contributors
for their support of medical education

Abbott Nutrition

American Academy of Pediatrics

Dairy Management, Inc.

Mead Johnson Nutrition

NMA Pediatric Section Voluntary Contributors

Pediatric Infectious Disease Society

We are grateful for their support.

SATURDAY, AUGUST 3, 2024

7:30 – 12:00 Annual Walk a Mile with a Child

1:00 – 3:00 Edward C. Mazique, M.D. Symposium

3:30 – 5:30 **Asthma Symposium: Clinical Care, Social Determinants and Health Equity
a combined session with the Allergy, and Family Medicine Sections**
*This symposium will be located in the Allergy Section Meeting Room:
Empire Ballroom West*

Need Assessment

Asthma health outcomes are some of the most disparate among chronic diseases. African American (AA) and Puerto Rican populations have the highest persistent prevalence with the greatest severity and poorest control (1) AA and Puerto Rican children have poorer responses to medication and are four times more likely to die than white children. African Americans in general are three times more likely to die and five times more likely to visit the hospital. Black women have the highest rate of death secondary to asthma; These disparities have not significantly changed in the last 15-20 years. The multifactorial nature of the disease, social determinants, and inadequate representation in clinical therapeutic trials contributes to disparate asthma outcomes. Asthma treatment in primary care settings in collaboration with subspecialists can facilitate a best care model. Physician education on new best practice paradigms will optimize outcome equity.

Practice Gap

Asthma health disparities persist despite expert clinical guidelines. Present best practices for asthma care give inadequate emphasis on economic, educational, and environmental barriers. The integration of clinical guidelines with attention to social determinants can improve patient outcomes and achieve greater health equity.

Learning Objectives

At the end of this session, learners will be able to:

- 1) Describe impact of implicit bias on the diagnosis and treatment of asthma;
- 2) Recognize the importance of social determinants in the prevalence, morbidity, and mortality of asthma;
- 3) Recognize updated guidelines for the use of topical steroids, biologics, and bronchodilators;
- 4) Identify areas of clinical asthma care that can be optimized with physician advocacy;
- 5) Discuss best practices for African American patient to avoid asthma triggers.

Moderators

Wizard Seide, MD FAAP

Chair-Elect, NMA Pediatric Section
Professor of Pediatrics
Uniformed Services University
Bethesda, Maryland
Branch Chief, Graduate Medical Education
Division of Medicine and Dentistry
Bureau of Health Workforce
Health Services and Resources Administration

Anne M. Staveren, M.D., FAAAAI

Board – Certified Allergist/Immunologist (Ret)
Los Angeles, CA

- 3:30 PM – 3:35 PM Welcome and Introduction of Session
Anne M. Staveren, M.D., FAAAAI
- 3:35 PM – 3:45 PM Pre-Test Questions
Wizard Seide, M.D.
- 3:45 PM – 3:50 PM Case Vignette – the asthma patient from infancy to adulthood
Wizard Seide, M.D.
- 3:50 PM – 4:10 PM Asthma: Overview: Prevention, Risks, and Diagnostic Pearls
Thomas A. Scott, M.D., MMM
Medical Director at Optum Health
Utilization Management Division
Birmingham, AL
- 4:10 PM – 4:30 PM Update: Therapeutic Asthma Guidelines
Nancy I. Joseph, DO, FAAAAI
Allergist/Immunologist
Massachusetts
- 4:30 PM – 4:50 PM Social Determinants of Health: Housing discrimination and asthma morbidity disparities
Elizabeth C. Matsui, MD MHS
Professor of Population Health and Pediatrics

Associate Dean for Faculty Academic Affairs
Director, the Center for Health and Environment: Education and Research
Dell Medical School
The University of Texas at Austin
Austin, TX

- 4:50 PM – 5:10 PM Asthma Education with Passion: The Roadmap to Community Engagement
Linda Nozart, MPH, BSRT, RRT, AE-C
CEO, Noz Health Ed, LLC
New York, NY
- 5:10 PM – 5:20 PM Panel Discussion/Audience Q&A
Thomas Scott, Nancy Joseph, Elizabeth C. Matsui, Linda Nozart, and Carla Davis
- 5:20 PM – 5:30 PM Post-test Questions/Session Adjournment
Anne Staveren, M.D.

SUNDAY, AUGUST 4, 2024

9:00 – 11:00 **The Edith Irby Jones, M.D. Plenary Symposium**

11:30 – 1:30 **Council on Concerns of Women Physicians Annual Awards Program**

Empire Ballroom East

2:15 – 2:25

4:00 – 5:30

Dr. Billie Wright Adams Scholars Reception

MONDAY, AUGUST 5, 2024

8:00 – 9:30

Dr. Grace M. James Memorial Symposium: Combating Maternal and Infant Mortality

a combined session with the Obstetrics and Gynecology Section

This symposium will be located in the Ob/Gyn Section Meeting Room: New York Ballroom East

Moderators

Jason Vaught, M.D.
Associate Professor of Gynecology and Obstetrics
Johns Hopkins University School of Medicine
Baltimore, Maryland

Aisha Rollins, M.D.
Secretary, NMA Pediatric Section
Pediatrician
San Diego, California

8:00 – 8:20

Crisis to Care: Insights and Strategies to Improve Infant and Maternal Mortality

Wanda Abreu, M.D.
Assistant Professor of Pediatrics
Child and Adolescent Health
Medical Director of the Well Baby Nursery
Columbia University
New York, New York

8:20 – 8:40

Empowering Black Birthing People through Community Building and Accessible Science

Birthing the Magic Collaborative

During this interactive session, attendees will delve into the challenges faced by Black birthing people, including highlighting existing inequities. Participants will also receive strategies for clinicians to use when advocating for their patients, families and communities. Attendees will engage with evidence-based resources provided through free virtual programming designed to bridge the gaps in awareness and knowledge experienced by Black birthing people. Participants will interact with the

panelists/facilitators to discuss communication strategies for empowering Black birthing people to make scientifically and culturally informed decisions throughout their perinatal journeys. By presenting this accessible, science-based approach to education and advocacy, leaders from Birthing the Magic Collaborative aim to inspire those in attendance to consider new perspectives that complement their existing clinical practice and prioritize culturally attuned care with the goal of achieving better outcomes for Black birthing people.

Following this presentation, attendees should be able to: 1) Cite key contributors to racialized inequities in U.S. Infant Mortality Rates, including pregnancy and postpartum complications, preterm birth, birth defects, and social determinants of health (SDOH); 2) Describe effective and evidence-based initiatives for reducing racialized inequities in U.S. Infant and Maternal Mortality Rates; and 3) Apply culturally attuned strategies for promoting infant health and well-being through holistic support of families and communities, including an emphasis on prenatal care, lactation support, and safe sleep practices.

Valencia P. Walker, MD, MPH, FAAP
Vice Dean for Health Equity and Inclusion
Geisinger Commonwealth School of Medicine
Scranton, Pennsylvania

8:40 – 9:00

Reframe Your 20 Minutes: How to Create Authentic Engagement with Families

Aza Nedhari, CPM, LGPC
Executive Director
Mamatoto Village
Washington, District of Columbia

9:00 – 9:20

Infant and Maternal Mortality

Sarah M. Wheeler, M.D.
Associate Professor of Obstetrics and Gynecology
Maternal-Fetal Medicine
Duke University Medical Center
Durham, North Carolina

9:20 – 9:30

Q &A Panel

9:30 – 11:00

Organizational Pediatrics Forum

Following participation in this symposium, attendees should be able to describe how national pediatric organizations plan to increase diversity among practicing pediatricians.

Moderator

Christopher Golden, M.D.

Panelists

COMSEP: Lavjay Butani, M.D. and Abena Knight, M.D.

APPD: Patricia Poitevien, M.D. and Megan Aylor, M.D.

Meharry Medical College
Nashville, Tennessee

4:25 – 4:30 Questions and Answers

TUESDAY, AUGUST 6, 2024

8:00 – 10:00 **Dr. David Nichols Annual Memorial Symposium**
Enhancing Quality of Life: Pediatric Palliative Care in
African American Communities

Despite growing evidence that the provision of pediatric palliative care reduces suffering and improves the quality of life for children and families navigating complex chronic illness, barriers to referral for consultation and utilization continue to exist for providers as well as patients. Due to longstanding structural and systemic barriers these inequities are exacerbated for marginalized communities. The impact of these disparities can be seen in every sector of society and in every disease category. For pediatric patients, the impact of these adverse outcomes extends from patient to caregiver, to siblings resulting in generational harm. This dynamic, diverse, and interactive panel of palliative care experts will review essential constructs of palliative care, summarize barriers to utilization of palliative care consultation, and address strategies for reducing inequities in palliative care for pediatric patients of color.

At the conclusion of this educational session, attendees should be able to: 1) Identify the essential constructs of palliative care; 2) Summarize barriers to utilization of palliative care consultation; and 3) Describe strategies for addressing inequities in palliative care.

Moderator David G. Nichols, M.D., MBA, FAAP
President and CEO, Emeritus
The American Board of Pediatrics

8:00 – 8:30

10:00 – 11:00

**Roland B. Scott, M.D. Memorial Symposium
Propelling Change for Sickle Cell Disease**

During this session, participants will learn about key knowledge gaps that can impact individuals living with sickle cell disease (SCD) and the community. Practitioners will begin to learn about common concerns that sickle cell patients may have about new therapies and the evidence of their efficacy and safety. Additionally, participants will learn the current landscape of sickle cell therapeutics—access and the patient voice. Participants will hear from a practicing clinician and clinician scientist about managing sickle cell and the balance of selecting the appropriate disease modifying medications for each patient, with multiple new FDA approved therapies for this disease. Participants will learn about different community-based organizations (CBOs) that support sickle cell patients and families and how to connect to specialized centers of excellence. Participants will learn about how to connect to important research to improve the quality of life, enhance cultural competency, care for sickle cell patients, and compose their plan to collaborate with subspecialists, community groups, or their local children's hospital in support of sickle cell patients and their families in their local area.

Following participation in this symposium, attendees should be able to: 1) identify and summarize the key gaps that exist in access to sickle cell therapeutics and gene therapies; 2) discuss the role of disease modifying therapies in sickle cell patients in the setting of available gene therapies; and 3) present an advocacy action plan to collaborate with subspecialists and community-based organizations (CBOs)

Health Care Needs of Children of Military Parents/Guardians

Moderator

Wizard Seide, M.D.

Children of military parents are at risk of exposure to adverse childhood experiences. Some unique characteristics of the military-connected pediatric population may increase their risk of adverse experiences beyond that of the general pediatric population. Exposure to these adverse experiences has been associated with different health outcomes. This presentation will describe the unique challenges, health disparities, and specific resources designed to support military-connected children.

At the conclusion of this presentation, attendees should be able to: 1) Describe unique characteristics of and challenges faced by military-connected children, 2) Understand health disparities among military-connected children, and 3) Identify resources available to support military-connected children.

Presenter Lieutenant Colonel (Dr.) Cortney C. Bleach
Program Manager for Medical Retention and Special Pays
Air Force Medical Agency

2:00 – 3:30

Breaking Barriers: Collaborative Approaches to Suicide Prevention in Pediatrics, Emergency Medicine, and Psychiatry

a combined session with the Emergency Medicine & Psychiatry Sections

Suicide is a significant public health concern, particularly among pediatric populations, with disparities in risk factors and access to mental health services playing a crucial role. This session focuses on the critical importance of addressing suicide prevention in health care settings for pediatric populations. Individuals experiencing suicidal ideation and behaviors are slipping through the cracks in our health and behavioral health systems. These gaps in care contribute to suicide being the second leading cause of death among people aged 10-24 in the United States, with rates steadily rising over the decades. According to a Centers for Disease Control and Prevention (CDC) report, mental health-related emergency department (ED) visits for suicide attempts among adolescents aged 12–17 increased by 31% in early 2021 compared to the same period in 2019 (American Academy of Pediatrics, 2023).

Although systems may have access to best practices in suicide care, not all providers are adequately trained to implement these practices, nor do systems consistently monitor adherence to them. This contributes to adverse events. This session will highlight tools, interventions, and best practices that can reduce or close gaps in patient care and enhance patient safety.

At the conclusion of this educational session, attendees should be able to: 1) understand the importance of addressing equity in suicide prevention efforts among pediatric populations; 2) identify key disparities related to suicide risk factors, access to mental health services, and cultural considerations that impact pediatric suicide rates; and 3) understand and implement evidence-based strategies for promoting suicide prevention specifically tailored to pediatric populations.

4:00 – 5:30 **Annual Business Meeting**

WEDNESDAY, AUGUST 7, 2024

8:00 – 10:00 **Healthcare Among Youth in the U.S. Juvenile Legal System: Challenges and Opportunities**

In 2021, approximately 25,000 youth were detained or committed in a U.S. detention center, with a disproportionate number of minoritized (Black Latinx, and Native American [64%], and male (86%) *86 %children. Despite the declining rates of youth arrest and incarceration, healthcare disparities for youth in custody persist at alarming rates. Two-thirds of youth in detention have physical and mental health needs and 46% have at least one diagnosed medical condition, compared to 19% of youth in the general population. Varying quality of care provision in facilities, limited healthcare access in the community, and related social determinants of health contribute to the disparities – some of which can be reduced by pediatrician engagement on the care of youth in custody. This session will highlight the health status of youth involved in the U.S. juvenile legal system, discuss available health services within this system, and explore essential qualities for effective engagement with this population. The session will offer perspectives from the lived experiences of youth in detention and emphasize the essential role of pediatric providers in ensuring comprehensive care for children re-entering their communities post-detention.

At the conclusion of this educational, attendees should be able to: 1) describe the health status of youth impacted by the U.S. juvenile legal system; 2) understand health services available in the juvenile legal system; 3) describe qualities for working with youth in the juvenile legal system; 4) understand the experiences of youth involved in the juvenile legal system; and 5) understand the role of pediatric providers in caring for children re-entering their communities from the juvenile justice system.
